

**EXPORT OF MEAT, VISCERA AND SAUSAGES DERIVED FROM PIGS TO JAPAN - 1292EHC**

**NOTES FOR THE GUIDANCE OF THE OFFICIAL VETERINARIAN**

**IMPORTANT**

These notes provide guidance to Official Veterinarians (OV) and exporters. The NFG should have been issued to you together with export certificate 1292EHC. These NFG should not be read as a standalone document but in conjunction with certificate 1292EHC. We strongly suggest that exporters obtain full details of the importing country's requirements from the veterinary authorities in the country concerned, or their representatives in the UK, in advance of each consignment.

**SCOPE OF CERTIFICATE**

1. Health certificate 1292EHC is intended to accompany consignments of pigmeat, minced pigmeat, sausages derived from pig meat (with casings derived from pigs only), ham and bacon to Japan from the United Kingdom.

**2. CERTIFICATION BY AN OFFICIAL VETERINARIAN (OV)**

This certificate may be signed by a Veterinary Officer of the Department or a Local Veterinary Inspector (LVI) appointed by the Department for Environment, Food and Rural Affairs (Defra), the Scottish Government, the Welsh Government or by an Authorised Veterinary Inspector (AVI) appointed by the Department of Agriculture and Rural Development, Northern Ireland, who is an Official Veterinarian (OV) on the appropriate export panel for export purposes.

OVs must sign and stamp the health certificate with the OV stamp in ink of any colour other than black.

A certified copy of the completed certificate must be sent to the Animal Health Specialist Service Centre - Exports - at Carlisle within seven days of signing, or in the case of Northern Ireland to DARD, Dundonald House, Belfast.

The OV should also keep a copy for his/her own records.

**DATE OF SLAUGHTER OF PIGS FROM WHICH MEAT, VISCERA AND SAUSAGES FOR EXPORT TO JAPAN ARE DERIVED**

3. The amendment to Japanese law that permits the importation of cloven hoofed animals and the meat and viscera derived from cloven hoofed animals from the UK to Japan was made on 6 October 2003.

**Only meat, viscera or sausages derived from pigs slaughtered on or after 23 May 2008 can be exported from the United Kingdom to Japan. In the case of imported pigs or products of porcine origin which has been imported into the UK, these must have been imported on or after 23 May 2008.**

**SEALING OF CONTAINERS**

4. Paragraph I (d) refers. All containers must be sealed with a seal of the type specifically approved for use for exports to Japan. The Japanese authorities have approved seals of the "POSICHECK" type made by ENVOPAK.

5. Paragraphs II (f) and (h) refer. The dates entered should be those of on which the meat was subjected to cutting, further processing and/or freezing.

#### **DISEASE AND OTHER CLEARANCES**

6. Paragraph IV (a) may be signed on behalf of the Department by the Official Veterinarian provided written authority to do so on form 618NDC has been obtained from the AHVLA Specialist Service Centre - Exports - at Carlisle or the issuing office of DARD in Northern Ireland within 10 days of shipment.
7. Paragraph IV (b) refers. This paragraph may be signed by the Official Veterinarian on behalf of the Department on the basis of the following information:

The United Kingdom does not permit vaccination for, nor the importation of animals vaccinated against foot and mouth disease, rinderpest, classical swine fever or African swine fever.

Regarding pig meat, the United Kingdom does not permit the importation of meat from animals vaccinated against foot and mouth disease, rinderpest or African swine fever. Regarding classical swine fever although the UK is permitted under EU rules to import pig meat preparations and meat products consisting of, or containing pig meat providing it has been treated in such a way that any classical swine fever virus present is destroyed (ie heat treated), in such cases the meat must be marked with special marks which cannot be confused with the oval health marks for pig meat provided for in EU Regulations (EC) No 854/2004 and (EC) No 853/2004. These products cannot therefore be marked with an oval mark. For meat products the OV should therefore check that there is an oval health mark on the constituent products.

8. Paragraph IV (c) may be signed on the basis that the feeding of swill to domestic pigs is prohibited by Article 9 of The Animal By-Products Regulations 2003 and by equivalent legislation in Wales, Scotland and Northern Ireland.
9. Paragraphs IV. d) (x) and (xi) relating to precautions to avoid contamination with pathogenic agents and packaging in new or clean packaging for export to Japan; refer. These paragraphs may be certified on the basis of familiarity with the factory processes in place supported by relevant documentation and/or suitable records. If the meat has been imported from a plant in another country which is also approved for export to Japan then it can be assumed that paragraphs IV. d) (x) and (xi) were complied with in that plant.

See paragraph 13 about checking if plants in other countries are approved for export to Japan.

#### **INTERNAL MOVEMENT CERTIFICATION PROVIDING INFORMATION FOR THE OFFICIAL VETERINARIAN AT THE PLACE OF CERTIFICATION FOR EXPORT.**

10. Official Veterinarians working for the Food Standards Agency will provide such internal movement certification on a form (see for example Annex A). Using this form, the OV at the abattoir / cutting plant/ processing plant etc can simply provide an Internal Movement Certificate (IMC) that states that the meat complies with the Japanese requirements. It is not necessary to provide further details on the Internal Movement Certificate.

The Official Veterinarian providing the final export health certification can use such Internal Movement Certification to confirm

that the pig meat has been produced according to Japanese requirements.

**It is not necessary that each consignment/lorry has to be delivered to the cold store with an internal movement certificate providing that the parts of the consignment for export can be reconciled with at least one IMC.**

### **THIRD FREE COUNTRIES**

11. Paragraphs IV. d) (i), (ii) and (iii) refer. The Japanese authorities have drawn up a list of countries, regions and zones from which Japan authorises the importation of pigs and pig meat. Such countries, regions and zones are referred to in the certificate as 'third free countries'. This term should not be confused with the term 'third country' (i.e. a country which is not a member of the EU)

The current list of Japanese 'third free countries' regarding pigs and pig meat is available at the following hyperlink:

<http://www.maff.go.jp/aqs/english/news/third-free.html> .

**OVs and exporters should note that this list includes Countries AND regions or zones which are approved by JMAFF as free from rinderpest, FMD, ASF and CSF and are eligible to export pig meat to Japan. In other words, in some countries such as France, Belgium and Germany, the whole country does not have to be free from these diseases to be eligible to export pig meat to Japan.**

### **CHECKS ON PIGS IMPORTED INTO THE UNITED KINGDOM FROM EU MEMBER STATES OR OTHER COUNTRIES**

12. Paragraph IV(d) (i) refers: It is the responsibility of the FSA Official Veterinarian to check that imported pigs originate from countries which are listed on the Japanese third free country list (see paragraph 11 of these NFG). As at November 2013, the UK imports pigs from few countries for fattening, slaughter or breeding - these countries include RoI, NL and DK. A few pigs are also imported for breeding from the USA and CAN. If the FSA Official Veterinarian needs to, s/he can check the website above to see if the pigs which have been imported have been imported for slaughter from a 'third approved country'. The country of origin will be on the health certificate / import licence with the pigs.

If pigs have been imported and then bred or fattened, the OV can check the country of origin by reference to the country code on the pigs' ear tags. Each tag will be marked with the country code of origin. If pigs have been imported and then bred or fattened, the OV must check that the pigs were imported on or after 23 May 2008. This can be done by simply by physical checks - ie that the pigs are young fat pigs that were not even born in 2008, or for old adult pigs by reference to records.

The third indent of paragraph IV(d) (i) regarding freedom from infectious disease can be certified on the basis that all pigs imported into the UK must be accompanied by a signed export health certificate from the country of origin that declares that the pigs are healthy and fit to travel. In other words if the pigs were legally imported they must have been healthy. The Official Veterinarian does not need to see each EHC for import unless they deem this is necessary. Official Veterinarians should note that the declaration at paragraph IV(d) (i) of the EHC only refers to Notifiable disease - this does not refer to non-Notifiable diseases.

The fourth indent of paragraph IV(d) (i) regarding direct importation and not transiting non-third free countries can be certified on the basis of EU rules on the control of diseases of pigs and, as appropriate, other animals.

The fifth indent of paragraph IV(d) (i) regarding freedom from animal infectious disease as a result of import inspection can be certified on the basis that this declaration only refers to Notifiable disease as described at paragraph IV(a) of the EHC and that if these Notifiable diseases had been confirmed, the pigs would not be eligible for slaughter for human consumption.

If necessary the Official Veterinarian should contact the AHVLA Specialist Service Centre - Exports - at Carlisle or the issuing office of DARD in Northern Ireland for advice.

For consignments of pig meat comprising meat from pigs from the UK and pigs from other 'third free countries' which are slaughtered at the plant in the UK, the OV should not delete any of the options in paragraph IV(d) (i) and all of the options in paragraph IV(d) (ii) should be deleted. No deletions should be made to paragraph IV(d) (iii). These procedures need to be followed to enable the certificate to be completed and for it to be accepted in Japan.

#### **CHECKS ON PIG MEAT IMPORTED INTO THE UNITED KINGDOM FROM EU MEMBER STATES AND OTHER COUNTRIES**

13. Paragraph II and IV(d) (ii) refer: In the case of pig meat imported into the United Kingdom, for cutting or processing, to complete paragraph II of the EHC and to meet the additional requirements laid down in paragraph IV(d) (ii), the Official Veterinarian must carry out checks to ensure that:

Paragraph II(a) and IV(d) (ii) first indent: the country of origin is included on the Japanese third free country list (see paragraph 11 above);

Paragraph IV(d) (ii) second indent: the pig meat etc is derived from pigs which have been born and raised only in third free countries;

Paragraph II(b), II(d) and II(e) if appropriate: that the plant(s) involved is included on the Japanese third free country list;

Paragraph IV(d) (ii) fourth indent: the meat was imported into the UK without passing through any country not on the Japanese third free country list;

These checks can be made by reference to the Japanese website (see paragraph 11 above) and also for plants by seeking a declaration signed by the Owner/ Operator/ Official Veterinarian at the plant of origin (ie the plant of export to the UK) in the other country. Such a declaration does not need to be obtained for every consignment; each year will be sufficient. It is only necessary to obtain such a declaration from the plant from which the meat is exported to the UK - ie for imported processed meat it is not necessary to obtain a declaration from the abattoir at which the pigs were slaughtered. A suggested form of words for this is at Annex B. This wording includes mention of the route that the lorries will use.

In addition to this, the Official Veterinarian can check if plants in other countries are approved for export to Japan by checking the Japanese Ministry of Agriculture (JMAF) website. The list of plants that are approved in the UK is at:

[www.maff.go.jp/aqs/tetuzuki/facility/pdf/gb.pdf](http://www.maff.go.jp/aqs/tetuzuki/facility/pdf/gb.pdf)

The list of plants that is approved in for example Denmark (DK) is at:

[www.maff.go.jp/aqs/tetuzuki/facility/pdf/dk.pdf](http://www.maff.go.jp/aqs/tetuzuki/facility/pdf/dk.pdf)

For other countries change the country code at the end of the link.

If none of this is possible the Official Veterinarian should contact the AHVLA Specialist Service Centre - Exports at Carlisle or the issuing office of DARD in Northern Ireland.

Paragraph IV(d) (ii) third and fourth indents also require that the Official Veterinarian must check that the imported meat is

- accompanied by the inspection certificate issued by the government authorities of the third free country.
- derived from pigs which have been free etc...;

These declarations can be certified on the basis that the carcasses or the packaging of the meat is marked with an oval mark indicating compliance with EU meat hygiene rules and that the carcasses or meat is accompanied by appropriate commercial documents;

Paragraph IV(d) (ii) fifth indent also requires that the Official Veterinarian must check that:

- the pig meat is free from any evidence of animal infectious disease as a result of import inspection etc...

This declaration can be certified on the basis that the carcasses or the packaged meat is marked with an oval mark indicating compliance with EU meat hygiene rules and was legally imported into the UK with and appropriate commercial documents and that it was inspected as deemed necessary by the Portal Inspection authorities in the UK.

Paragraph IV(d) (ii) first indent also requires that the Official Veterinarian must check that the imported meat is

- **imported on or after 23 May 2008.**

This can be done by reference to commercial records.

If necessary the Official Veterinarian should contact the AHVLA Specialist Service Centre - Exports - at Carlisle or the issuing office of DARD in Northern Ireland for further advice about these declarations in advance of the export.

Where pig meat for export to Japan is prepared from meat imported into the UK, the OV should delete paragraph IV (d) (i) and also delete the first deletable option at paragraph IV(d) (iii) which reads: "been born and raised only in the United Kingdom". See again paragraph 12 above.

#### **OTHER DECLARATIONS CONCERNING CLASSICAL SWINE FEVER**

14. Paragraph IV.(d) (iii) refers. Under EU rules (Commission Decision 855/2008 as amended) neither live pigs nor fresh pig meat or pig meat products may be exported from Member States or their regions which are affected with CSF (and therefore may be using CSF vaccine) to other Member States.

However, pig meat preparations and meat products consisting of, or containing pig meat may be dispatched to other Member States if they are treated in such a way (ie heated) that any classical swine fever

virus present is destroyed. If these exports take place, such pig meat, pig meat products and preparations must be marked with special marks which cannot be confused with the health marks for pig meat provided for in EU Regulations 853/2004 and 854/2004. In other words such pig meat and pig meat products and preparations cannot be marked with the oval health mark as required under the EU Hygiene Regulations. The Official Veterinarian can therefore certify paragraph IV(iii) by carrying out checks on this basis. If pig meat is imported from third free countries outside the EU, the OV should seek guidance from AHVLA Carlisle or DARD.

#### **CHECKING DETAILS OF PREMISES AND PROCEDURES FOR EXPORT TO JAPAN**

15. Paragraphs IV. d (v) and (vi) refer. Exports to Japan may only take place from EU approved premises that are also specifically authorised for exports to Japan and notified to the Japanese authorities. This applies not only to the slaughterhouses, cutting and processing premises, but also to any cold stores.

The Japanese authorities are likely to refuse entry of consignments, if the details of approved establishments (e.g. slaughterhouses / cutting plants / processing premises / cold stores) on the export certificate are not included on their list of authorised premises.

16. Certifying Official Veterinarians must therefore ensure that premises details are correctly recorded on the certificate, especially if the exporting company has recently changed ownership. Where the name of the exporting company has changed, details must be sent via the AHVLA Specialist Service Centre - Exports - at Carlisle or the issuing office of DARD in Northern Ireland to the Japanese authorities and formal approval obtained before exports commence from that premises.

See paragraphs 11 and 13 above regarding checking if plants in other countries are approved for export to Japan.

#### **HANDLING AND SEPARATION OF PIGS AND PIGMEAT**

17. In respect of paragraphs IV (d) v) and IV (d) (vi) which refer to handling pigs and meat in plants that are approved for the export of pigmeat to Japan:

The declaration at IV(d) (v) regarding the pigs can be made based on checks on ear tags and if necessary further enquiries - see also paragraph 12 of these NFG.

As regards the declaration at paragraph IV(d) (vi) this declaration can be certified firstly on the basis that the UK plant is approved for export of pig meat to Japan and secondly that any imported pig meat moved to the plant originates from plants in other countries, regions or zones that are also approved to export to Japan and that the meat has only been transported through approved countries/regions/zones. The basis for checking that those plants in other counties, regions or zones are approved for export to Japan is indicated at paragraph 13 of these notes for guidance.

Where other pig meat is handled in a plant and that pig meat does not, is not known to, originate from a plant which is approved for export of pig meat to Japan, then suitable temporal or physical segregation must be established. This can be done by for example by handling the non-approved pig meat after approved pig meat has been processed or by ensuring that the meat for Japan is spatially handled separately. In this context the interpretation of the declaration at IV(d) (vi) is therefore that in the premises involved the meat handled

for export to Japan comprises only meat which originates from the pigs born and raised only in the United Kingdom or countries approved for the export of pig meat to Japan and that the handling of this meat is physically separate from other meat that is not known to be approved for export to Japan.

18. Paragraphs IV(d) (iv), IV(d) (vii) and IV(d) (viii) may be certified on the basis of oval marks which demonstrate compliance with EU Regulations (EC) 853/2004 and 854/2004.

#### **EQUIVALENCE OF UK AND JAPANESE HEALTH STANDARDS**

19. Paragraph IV (e) may be signed on the basis of an agreed comparison between meat hygiene legislation in force in Japan and the UK. It was concluded by FSA and Defra that, for the production of fresh meat and meat preparations, the level of protection offered by Japanese and UK meat hygiene legislation is equivalent.

#### **SAUSAGES USING CASINGS OF ANIMAL ORIGIN**

20. Paragraph IV(f) refers. This paragraph may be deleted if the sausages are manufactured from artificial collagen casings.

For casings of animal origin, the casings must be derived only from porcine animals. The country of origin of the casings must be entered at paragraph IV(f) (ii) and the name and approval number of the casings processing facility entered at paragraph IV(f) (iii).

Paragraph IV(f) (iv) may be deleted if the country of origin of the casings is included on the third free country list at paragraph 9 above. For countries not included on the third free country list, the Official Veterinarian must have sufficient documentary and other evidence to certify this paragraph. This documentary evidence may not be readily available and the Official Veterinarian should contact the AHVLA Specialist Service Centre - Exports - at Carlisle or the issuing office of DARD in Northern Ireland for further advice.

In the light of this possible difficulty, exporters are advised to ensure that casings of porcine origin are imported only from countries that are included on the Japanese third free country list.

#### **DISCLAIMER**

21. This certificate is provided on the basis of information available at the time and may not necessarily comply fully with the requirements of the importing country. It is the exporter's responsibility to check the certificate against any relevant import permit or any advice provided by the competent authority in the importing country. If these do not match, the exporter should contact the AHVLA Specialist Service Centre at Carlisle via the link below:

<http://www.defra.gov.uk/ahvla-en/about-us/contact-us/specialist-service-centre/>

**Plant Approval Stamp**

**SUGGESTED WORDING FOR A DECLARATION FROM AN OWNER / OPERATOR / OFFICIAL VETERINARIAN AT A PLANT IN ANOTHER COUNTRY FOR PIG MEAT TO BE EXPORTED TO THE UNITED KINGDOM**

**USE HEADED PAPER**

**GIVE PLANT NAME, ADDRESS, EU APPROVAL NUMBER AND MAP REFERENCE**

I refer to the Japanese conditions for the export of pig meat to Japan.

I CONFIRM THAT:

1. [COUNTRY] is included on the Japanese third free country list for the export of pig meat to Japan.
2. [name the plant] is approved for export of pig meat to Japan and is listed on the JMAF website at: [add link to JMAF website].
3. The pig meat [etc ie specify the range of products] to be exported to [plant in the UK] is derived from pigs which have been born and raised only in third free countries according to Japanese requirements;
4. The pig meat [etc] to be exported to [plant in the UK] complies with the Japanese requirements;
5. The pig meat will be exported to [plant in the UK] without passing through any country, region or zone not on the Japanese third free country list;
6. I will inform [plant in the UK] if the meat exported to the UK does not meet the Japanese requirements.

Signed:

Name:
