HEALTH CERTIFICATE - PART B
 EXPORTING COUNTRY: UNITED KINGDOM

FOR COMPLETION BY: OFFICIAL VETERINARIAN

VI. Origin of the semen

- a) Name and address of approved Semen Collection Centre:

- b) Approval number of Semen Collection Centre:.....
- c) Name and address of exporter:

- d) Name and address of consignee:

- e) Import permit number(s):.....

VII. Health Information

I, the undersigned, hereby certify that the semen described above meets the following requirements:

- a) **EITHER**
 *(i) in so far as can be determined there has been no clinical, cultural or pathological evidence of Johne's disease in the herd of origin of the donor bulls for the three years period before the bulls entered the Semen Collection Centre;

OR
 *(ii) during the residency period of the donor bulls at the Semen Collection Centre, a pooled faecal sample from the entire herd at the Centre was sent to an official laboratory where it was cultured and tested for Johne's disease with negative results;

* Delete as appropriate

OR

* (iii) within the period between 12 months preceding the date of the first collection and 12 months after the date of the last collection of semen for export to South Africa, the donor bulls have been tested on two occasions at least 3 months apart with negative results for Mycobacterium paratuberculosis using one of the following tests:

EITHER

* (a) onand.....(date) blood samples were taken from the donor animals and sent to an official laboratory where they were submitted to a complement fixation test for Johne's disease with negative results (negative means less than 50% fixation at 1:10);

OR

* (b) onand.....(date) blood samples were taken from the donor animals and sent to an official laboratory where they were submitted to an enzyme linked immunosorbent assay (ELISA) for Johne's disease with negative results;

- b) with regard to Schmallenberg virus (SBV), the donor animals showed no clinical signs before, during and after the collection of the semen in this consignment and were subjected to a virus neutralisation test or serological test approved by the Directorate Animal Health, at an official laboratory, to detect antibodies of Schmallenberg virus, with negative results, within 30 days prior to the first collection of the semen in this consignment and again between 28 and 60 days after the last collection of the semen in this consignment;
- c) the semen has been hygienically packed into flasks which were cleansed and disinfected beforehand, using fresh nitrogen not previously used for storage of animal products and sealed under veterinary supervision before loading with a tamperproof seal numbered
- d) no case of vesicular stomatitis has occurred at the Semen Collection Centre named at paragraph III a) above or within a radius of 20 km thereof during the 12 months immediately preceding the collection of semen for export;
- e) at the time of collection of the semen, the United Kingdom was free of foot and mouth disease in accordance with the OIE International Animal Health Code.

* Delete as appropriate
