No:

EXPORT OF BREEDING PIGS TO THAILAND

HEALTH CERTIFICATE

EXPORTING COUNTRY: UNITED KINGDOM (GREAT BRITAIN AND NORTHERN IRELAND)

FOR COMPLETION BY: OFFICIAL VETERINARIAN

I. Number and identification of the animals

Official Ear Mark	Breed	Sex	Age

II. Origin of the animals

- a) Name and address of exporter:.....

- b) Address of premises of origin:.....

- c) Address of isolation premises (if different to II (b)):.....

III. Destination of the animals

- a) Name and address of consignee:.....

- b) Address of destination of the animals:.....

- c) Means of transportation:
 (Registration of Vehicle/Flight No./Name of Ship)

IV. Health information

I, the undersigned Official Veterinarian, certify that the animals described above meet the following requirements:

- (a) the United Kingdom is free from foot and mouth disease, African swine fever, Teschen disease and rinderpest;
- (b) no outbreak of classical swine fever (hog cholera) has occurred at the premises of origin or isolation premises during the past 2 years nor within a 10km radius of these premises within the past 12 months. Vaccination against classical swine fever is prohibited in the United Kingdom;
- (c) the premises of origin and isolation premises are not situated in an area subject to official restrictions due to a notifiable disease to which pigs are susceptible;
- (d) there has been no clinical evidence of the following diseases at the premises of origin or isolation premises;
- (i) porcine reproductive and respiratory syndrome (PRRS) - during the past two years;
- (ii) tuberculosis, brucellosis, leptospirosis, swine vesicular disease, porcine parvovirus, enterovirus encephalomyelitis (Teschen disease), atrophic rhinitis, transmissible gastroenteritis, toxoplasmosis, trichinosis or *Streptococcus suis* type 2 - during the past 12 months;
- (e) the animals have been held in officially approved isolation accommodation under the supervision of an Official Veterinarian during a period of not less than 30 days prior to loading and have not been in contact with other pigs not similarly certifiable;
- (f) **either**
- i)* in the case of pigs exported from Great Britain;**
- Great Britain has been free of Aujeszky's disease during the past two years. Vaccination against Aujeszky's disease is not permitted in Great Britain; **or**
- ii)* in the case of pigs exported from Northern Ireland;**
- there has been no clinical, serological or pathological evidence of Aujeszky's disease on the premises of origin or isolation premises during the past 12 months; **and**

on (date), being within the pre-export isolation period and within 30 days of loading, blood samples were taken from the animals described above and sent to a Government laboratory where they were subjected to a serum neutralisation test (SNT) or ELISA test for Aujeszky's disease with negative results in each case (negative for the SNT at a dilution of less than 1:4);

(g) on(date), being during the pre-export isolation period and within 30 days of loading, samples were taken from the animals described above and sent to a Government laboratory where they were submitted to the following tests with negative results in each case:

- (i) brucellosis - ELISA or serum agglutination test (SAT) (reaction less than 30 iu/ml);
- (ii) transmissible gastroenteritis - serum neutralisation test (SNT) or differential ELISA;
- (iii) PRRS - ELISA or immunoperoxidase monolayer assay (IPMA);
- (iv) atrophic rhinitis - bacteriological examination of nasal swabs for toxigenic strains of *Pasteurella multocida*;

(h) **either**

* (i) on(date), being during the pre-export isolation period and within 30 days of loading, blood samples were taken from the animals described above and sent to a Government laboratory where they were submitted to the microscopic agglutination test (MAT) using live antigen for leptospirosis (serotypes *L. pomona*, *tarassovi*, *icterohaemorrhagiae* and *grippotyphosa*) with negative results in each case (negative is less than 50% agglutination at a dilution of 1:100); **or**

* (ii) on(date), and again on(date), being 14 days after the first treatment and within 24 hours of loading, the animals described above were injected with dihydrostreptomycin at a dose rate of 25 mg/kg live body weight;

(i) on(date), being within four days of export, the said animals were treated with the following licensed broad spectrum anthelmintic in accordance with manufacturer's instructions:

Name of product:.....
Active ingredient:.....

(j) on(date), being within four days of export, the said animals were treated for external parasites with the following licensed product in accordance with manufacturer's instructions:

Name of product:.....
Active ingredient:.....

(k) on(date), being within 24 hours of loading, I examined the animals and found them to be free from clinical signs of infectious or contagious disease, including ectoparasites, and in my opinion fit to travel;

*** Delete if not applicable**

V. This certificate is valid for 10 days.
