

## RMOP REQUIRED METHODS OF OPERATION PROCEDURES FOR ESTABLISHMENTS EXPORTING BEEF TO CANADA: COMPLIANCE WITH SPECIAL CONDITIONS

	Establishment Approval Number:	
Address:		
Establishr	ment type: Slaughterhouse/cutting-plant/processing plant	
	Species of meat intended for export to Canada: Bovine	
Product type intended for expor	t to Canada: Precursor Material (PM)/ Finished Raw Ground Beef Product (FRG	BP)
Additional		
Product		
Description:		

Column 1 of the following table lists those requirements which go beyond EU legislation (referred to as 'special conditions') that Canadian Food Inspection Agency (CFIA) certified establishments have to comply with for the sampling and testing of beef intended for export to Canada (Article 12 of Regulation (EC) no 178/2002 refers). Column 2 must be completed to show all the facilities or procedures necessary to ensure that these requirements are met in the certified establishment. Column 3 must be completed with the names or job titles of establishment staff responsible for ensuring that the listed facilities and procedures listed are in place and operating correctly. All parties must keep abreast of the latest CFIA requirements by checking Annex O from the CFIA Manual of Procedures for more information on this requirement <a href="http://www.inspection.gc.ca/food/meat-and-poultry-products/manual-of-procedures/chapter-4/annex-o/eng/1370616273137/1370616333827">http://www.inspection.gc.ca/food/meat-and-poultry-products/manual-of-procedures/chapter-4/annex-o/eng/1370616273137/1370616333827</a>

Column 1	Column 2 Col	
Requirement	Description of facility or control procedure by which the requirement will be met AND the corrective action envisaged, Person	
(Special Condition)	including to prevent a recurrence, in the case of process deviation / non-compliance	for supervision
A. HACCP PLAN		
A.1. The HACCP* plan must include the		
following measures:	l l	
a) Identification of the product and		1
intended use with regards to E.		1

coli O157 hazard and controls.		
b) E. coli O157 hazard is clearly		1
identified and passed through a		l
decision tree.		1
<ul> <li>c) The FBO must determine how</li> </ul>		1
the hazard will be controlled, for		l
example, through CCPs, pre-		l
requisite programs or process		1
controls.		l
*The HACCP system must be validated to		1
demonstrate that the level of E. coli O157		l
in raw beef products is below the		1
detectable level.		1
B. CONTROL MEASURES		
B.1. Dressing procedures.		
The FBO must develop, implement and	· · · · · · · · · · · · · · · · · · ·	
maintain a written control program within		
their HACCP system to ensure that the	· · · · · · · · · · · · · · · · · · ·	
dressing procedures are followed and		
implemented in a manner to prevent the	· · · · · · · · · · · · · · · · · · ·	
contamination of carcasses and other raw	· · · · · · · · · · · · · · · · · · ·	
meat products with biological hazards.		
B.2. Airborne contamination.	· · · · · · · · · · · · · · · · · · ·	
The FBO must develop, implement, and	· · · · · · · · · · · · · · · · · · ·	
maintain a written control program within		
their HACCP system to prevent airborne	· · · · · · · · · · · · · · · · · · ·	
contamination of the meat products,	· · · · · · · · · · · · · · · · · · ·	
especially carcasses.		
B.3. GMP.	· · · · · · · · · · · · · · · · · · ·	
The FBO must develop, implement, and		
maintain a written control program within	· · · · · · · · · · · · · · · · · · ·	
their HACCP system to ensure that the	· · · · · · · · · · · · · · · · · · ·	
Good Manufacturing and Personnel		
Hygiene Practices are followed and	· · · · · · · · · · · · · · · · · · ·	
implemented in a manner to prevent the	· · · · · · · · · · · · · · · · · · ·	
contamination of carcasses/raw meat	· · · · · · · · · · · · · · · · · · ·	
products with biological hazards.		
B.4. Storage and transport.	· · · · · · · · · · · · · · · · · · ·	
The FBOs must develop, implement, and	· · · · · · · · · · · · · · · · · · ·	
maintain a written control program within	•	
their HACCP system to ensure that	· · · · · · · · · · · · · · · · · · ·	
conditions under which the carcasses are	· · · · · · · · · · · · · · · · · · ·	
stored and transported are satisfactory.		
O MANDATED TEOTING OF DEFOU	DOOD MATERIAL (DM)+ THAT	
C. MANDATED TESTING OF PRECU		
IS INTENDED TO BE EXPORTED TO CANADA		

C.1. Testing protocol.	
FBOs must implement a robust testing	
protocol for each production lot of any	
type of PM according to appendix 2 of	
Annex O of the CFIA Manual of	
Procedures	
http://www.inspection.gc.ca/food/meat-	
and-poultry-products/manual-of-	
procedures/chapter-4/annex-	
o/eng/1370616273137/1370616333827#a	
pp1. In summary:	
- Sample pick up.	
- Lab the sample will be sent to.	
- Screening and/or confirmation	
methodology requirements.	
Also describe:	
<ul> <li>Sample storage and secure dispatch to lab.</li> </ul>	
dispatch to lab.	
C.2. Sampling procedures.	
C.2. Sampling procedures.	
- A minimum of <b>60 sub-samples</b>	
must be examined per lot A lot cannot exceed <b>five</b>	
combos (or alternative unit	
such as a pallet of boxes) and	
cannot weigh more than approximately <b>4,500 kg</b> .	
- All combos/units must be	
equally represented in the	
sample. For example, a minimum of <b>12 individual</b>	
pieces would be taken from	
each combo of a five combo lot.	
For alternate units, a minimum	
of 60 equally distributed pieces	
must be collected across the lot	
(e.g., a 10 vat lot of trim could	
be sampled by collecting six	
pieces per vat, a five pallet lot	
could be sampled by collecting	
12 pieces per pallet, etc.).	
- A minimum of 325 g of material	
from each lot shall be collected	
and submitted for testing. At	
least 65 g of material (12 pieces	
weighing 5 or 6 g each) would	
be collected from each combo in	

	a five-combo lot.	
_	The material collected for	
	testing should represent the	
	outside surface of the product.	
AUSDA	FSIS video, describing N60	
	, can be found at	
https://w	ww.youtube.com/watch?v=wlXizK	
gv70E	ww.youtube.com/watch:v=wixi2N	
<u>qv70E</u>		
TI 500		
	must train named operatives to	
undertak	e the sampling and the CA	
	S/DAERA) must supervise FBO	
sampling	of lots at a frequency of 10%	
	to 5% if the operative/s	
	nce is satisfactory. A record of	
	ervision must be kept.	
	nition of lot.	
	must define the lot in their	
written p	ogram for the purpose of	
	PM for E. coli O157 using the	
following	guidelines:	
1.	A lot is defined as comprising all	
	cartons, packages or containers	
	either:	
a)	Produced under the same	
,	conditions at one establishment	
	from one effective clean-up and	
	sanitation to the next effective	
	clean-up and sanitation	
	provided the volume of	
	production does not exceed	
	approximately 4500 kg; or	
b)	Determined by the operator	
, , , , , , , , , , , , , , , , , , ,	when implementing a	
	statistically based sampling	
	program (robust testing or	
	alternate sampling protocol	
	accepted by the CFIA); or	
c)	Establishments producing less	
()	than 4,500 kg of each type of	
	PM (e.g., trim, bench trim,	
	cheek meat, hearts, finely	
	textured beef etc.) per day may	
	consider more than one day of	
	production as one lot for that	
1	type of PM provided that they	I

	meet the following conditions:	
	_	
	(i) Perform full sanitation	
	and cleaning at the	
	end of each	
	production day,	
	(ii) The product lot does	
	not exceed five	
	consecutive calendar	
	days of production	
	and does not exceed	
	approximately 4500	
	kg,	
	(iii) The entire lot is	
	evenly sampled for	
	testing and in the	
	event of a positive	
	test result, the whole	
	lot is considered to be	
	positive and the source materials	
	subjected to	
	investigation.	
	investigation.	
2.	Before taking a sample for E.	
	coli O157 testing, the operator	
	must isolate and clearly identify	
	the lot according to their written	
	program and to the satisfaction	
	of the FSA inspector. It is	
	strongly recommended that the	
	lot, and any raw product	
	manufactured from the lot, be	
	held pending receipt of	
	laboratory results.	
	The operator must further	
	identify the supplying	
	establishment number (if	
	product received from another	
	establishment), the production	
	date, production lot number and	
	any other relevant data	
	available about the lot.	
D.	TEST RESULTS	
J.	TEST REGUETO	
	ults of tests.	
All results	s must be transmitted directly to	

ine OV for scrutiny and action as appropriate. A positive release policy must be established. Where receiving established where receiving established is recommended that all results, including results where E coll G157 is not detected, should be reported back to the supplying staughter establishment on son going to gather data in the case of a High Event Period occurring).  D.2. Positive results.  The FBO must describe what will happen in the event of obtaining positive results for E. coll G157; including what will the plant do with the product, how investigations will be carried out and how the plant will prevent a recourrence, describing all necessary follow up actions. This will apply to presumptive positive to such activities and propriet of the product of		
be established. Where receiving establishments are sampling PM it is recommended that all results, including results where E oil 0157 is not detected, should be reported back to the supplying staughter establishment on an ongoing basis, to allow slaughter establishment on an ongoing basis, to allow slaughter establishments to Period occurring. E.1. Process awareness. As a part of their HACCP system, FBOs must develop, implement and monitor process awareness programs and must		
As a part of their HACCP system, FBOs must develop, implement and monitor process awareness programs and must	, ,	
must develop, implement and monitor process awareness programs and must		1
process awareness programs and must		1
		1
,	analyse the data to determine trends over	1
time. Out of control situations or deviations		1
determined through process awareness		1
should be addressed through root cause		1
analysis, appropriate corrective actions,		1
preventative measures and annual		1
validation programs.	validation programs.	

As a part of process awareness, the FBOs must establish criteria/limits to define periods when the analysis indicates a potential loss of control.		
E.2. High Event Periods (HEP). Beef establishments producing PM		
and conducting robust N-60 sampling and testing programs must identify		
and document HEP criteria.		
CFIA requires establishments to take		
action if sampling of PM produces a positive rate which is statistically		
significantly greater than or equal to 5%. While developing HEP numerical		
criteria, establishments may opt for		
95%, 98.85% or 99.95 % confidence intervals.		
The PM that tested "not detected" but		
obtained from same source materials as those which have tested positive		
may be considered as suspect PM.		
Beef slaughter and further processing		
establishments producing less than seven lots of PM per day are not		
required to develop HEP protocol but		
will have to investigate every positive test result.		
F. CONTROLS FOR SUPPLYING/RE	ECEIVING	
PRECURSOR MATERIAL (PM)		

F.1. Establishments supplying raw	
material	
Carcase meat	
When carcases (Whole, half or quarter) are supplied to a receiving	
establishment for the purpose of	
producing PM, the supplying	
slaughter plant does not have to	
test this meat for E coli O157.	
Primals, subprimals, Bench trim	
When an establishment supplies	
these PMs to a receiving	
establishment and they are	
destined for use in FRGBP, then the establishment producing these	
PMs is required to test for E. coli	
0157.	
(Annex O, 5.3 CFIA)	
F2 Further processors receiving	
raw material	
Where receiving establishments	
process meat from more than one	
supplier, then the receiving	
establishment should either	
i) establish microbiological independence between lots from	
different suppliers to prevent cross	
contamination or	
ii) be aware that testing of processed	
lots which are not microbiologically	
independent may implicate more than	
one supplier for the purpose of traceback investigations when a	
positive result is obtained.	
Lotting, processing and testing	
protocols should be clearly defined	
and agreed between supplying and	
receiving establishments in a Letter of	
Guarantee. (see F3)	
When bench trims or PM for export	
are produced from sourced materials	
which have already been tested by	
the supplier it is not necessary to test	

the subsequent bench trims/ PM	
again. However this is on the basis	
that the lot has been clearly identified	
and segregated from other untested	
materials, with microbiological	
independence being maintained.	
When E Coli is detected, FBOs must	
verify the status of CCPs and test	
results, that have been taken at the	
supplying plant, to identify any	
deviation, unusual trends or HEP.	
This must take place as specified in	
the purchase specification agreement	
(please see point F.3) and the	
competent authority must be	
informed,	
F.3. Controls for suppliers of PM.	
FBOs supplying raw PM to other	
establishments, must review their	
HACCP system to ensure compliance	
with the purchase specifications. The	
purchase specifications agreement	
between the supplying and receiving	
plants must reflect the following	
controls:	
A. The letter of Guarantee	
(LOG), signed and dated by	
the FBOs of the supplying	
plant and receiving plant. It	
must include the CCPs and	
other measures used to	
reduce, prevent or eliminate	
E. coli O157-associated	
hazards.	
B. The supplier must have a	
written programme to	
monitor and verify that only	
products tested 'not	
detected' are supplied. The	
tests results must be sent	
with the production lot.	
C. If the sampling of the PM is	
carried out in the receiving	
plant: (i) there will be prior	

THE ABOVE DETAILS MUST NOT BE CHANGED WITHOUT FIRST HAVING GIVEN WRITTEN NOTICE TO YOUR OV AND HAVING OBTAINED HIS/HER AGREEMENT TO THE INTENDED CHANGE. ALL THE PROCEDURES WITHIN THIS DOCUMENT BECOME BINDING BETWEEN THE PARTIES AS FROM THE DATE OF OV SIGNATURE.
